

ANTARTICA 1947

The war that never existed

What happened in Antarctica in 1947? What are governments hiding behind their official versions of the events? Why is this material still classified today?

SYNOPSIS

Between June and August of 1945 various German submarines surprisingly appeared in Argentinean waters. What were they doing there several months after the end of World War II? Where did they come from? What was their route?

The United States has confirmed their own worst fears: Nazi Germany has a last military and scientific stronghold in Antarctica: Base 211. Immediately Operation Highjump is put into action. While the official excuse for being there is to test military equipment in the extreme cold, the real and secret objective is to destroy the German enclave. The famous Admiral Richard E. Byrd heads the operation and with the approval of Secretary of Navy James

Forestal, Admiral Chester Nimitz, and President Truman, he organizes the greatest military operation ever in the South Pole.

At the same time and in secret, submarine Captain Patrick Malone receives the order to attack Base 211 with the captured German submarine U-2193, which serves as surface support and as a "Trojan Horse".

This exhilarating novel describes in an impassioned and precise manner the heroic achievement of these men who faced tremendous obstacles as they headed towards an unexpected and disturbing end of their operation. What happened in Antarctica in 1947? What are the participating governments hiding behind their official versions of the events? Why is this material still classified today?
