

# THE IN-FORMED UNIVERSE

*The answers to all mysteries of the science of today by building a new theory*

**Dr. Ervin Laszlo's "The informed universe" is a more popular and accessible restatement of the ideas he had already put down in his other books. He describes his version of an informed universe and presents the "field A" as the cornerstone to a new scientific theory that works as an answer to everything that the modern science hasn't got answers to or just paradoxical ones.**

In this visionary and impudent work, the philosopher, scientific and founder of the "Club of Budapest", Ervin Laszlo plants a field of information as the clue to the cosmos. Dr Ervin Laszlo takes the Sanskrit word "akasha" (space) and names it "field A". In this work, Laszlo underlines the idea that the empty cosmos is the fundamental energy of the universe and

the field of transmission of information that "informs" the universe. Laszlo thinks that this field is able to solve multiple questions of the modern science and permits to understand the surprising fertility evolution of the universe.

In this book, the author guides us, in an entertaining way, to the unresolved mysteries that stand in contrast to

modern science (quantum physics, astronomy and biology) and proclaims the "field A" as a conclusion, because it resolves problems and paradoxes of quantum physics, especially the phenomenon of no-locality. Nevertheless, he proclaims his "new theory" (TEORIA DE TODO) as the solution for the constant argues between science and religion.

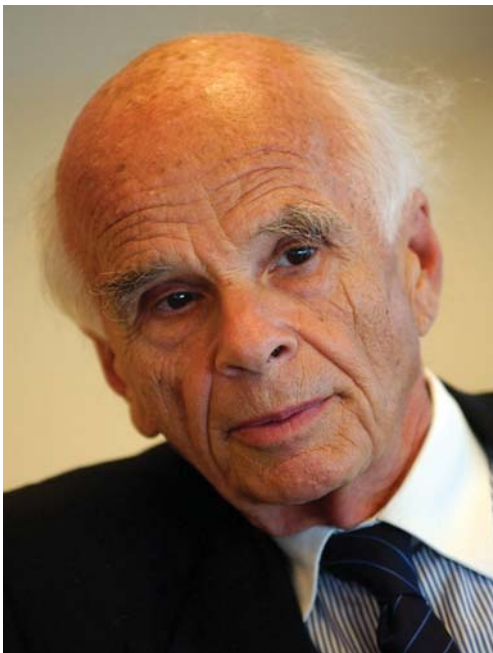

**Ervin Laszlo.** He is a philosopher, scientist and humanist and the president of the "Club of Budapest", co-author of more than 70 books that were translated into 20 languages and author of 24 volumes that include an encyclopedia. Furthermore, he was nominated for the Nobel peace prize in 2004. "Tu puedes cambiar el mundo" and "La ciencia y el campo akásico" are other of his books published by Nowtilus.

Title: The In-formed universe  
Author: Ervin Laszlo  
Paperback with flaps

Size: 17x22,5 cm  
ISBN:978-849763381-9  
Pages: 256
