

THE SECRET OF ALCHEMISTS

INVESTIGACIÓN ABIERTA

Juan Ignacio Cuesta

The fascinating, scientific and hermetic history of the philosopher's stone search. Beginning with Hermes Trismegistus and The Kybalion, to the Phlogiston, Bacon, Isaac Newton and the birth of modern Chemistry.

Synopsis

The secret of Alchemists probes into one of the deepest mysteries of human nature; Alchemy. In search of the truth about a practice, which is as archaic as enigmatic, this work will cover the path between science and magic, hypothesis and beliefs, demonstrations and myths, together with famous historical figures that turn the narration into a truthful trip through the intricacies of an occult knowledge.

A deep and detailed analysis about alchemy as an integral part of human evolution, and as a direct influence on the path of several historical figures.

A study born from exact sciences such as Physics, Chemistry or Mathematics, but whose discipline is conceived as the main ascendant of these exact sciences. Therefore *The secret of Alchemists* reserves a significant space to explain the family tree of Alchemy and its position within it. Alchemists are holders of such knowledge, halfway between science and magic, which become the main protagonists of this book. For this reason, the author gives expression to what he considers the most fascinating gathered material: the texts of the own alchemists. It is a risky bet as this is a delicate material, but at the same time, honest with the readers, who will discover Saint Germain, Saint Thomas Aquinas or Goethe, among others, direct links to Alchemy.

Sales pitch

This work is created with historical rigor and informative willingness on one of the most controversial topics of all time, from an in-depth analysis of its nature, origin, development and influence on human evolution. This title will allow the reader to learn the keys of The Kybalion.

In order to achieve that, it includes the original texts of the very alchemists. It also presents all the biographies of the most important alchemists of all time, such as Saint Germain, Saint Thomas Aquinas or Goethe
