Sales pitch

-*Brief History of Economy* offers a complete, and enjoyable tour, through the history of economy from the first anthropological forms of construction of simple manufacturing tools, to the current technoscience. In this work there are important historical facts that set up the economy in the past, such as commerce, the agrarian revolution, the concept of property, feudalism, the Industrial Revolution or capitalism. The work revises the relationships of production in societies of all places (Mesoamerican, for example), and historical moments (Roman Empire, Middle Ages,...)

-The author presents the economy in an interdisciplinary way, as he explains its role policies in the confirmation of societies, as well as the scientific, technological, and technical character that has influenced its configuration.

- The work includes numerous additional material that facilitates the comprehension of the text: images, graphic, chronologies that the reader is not accustomed to see in similar titles, and that help with the contextualisation of the narrated text.

-The work is based on a rigorous historical research that carries a neutral and aseptic view of this topic. *Brief History of Economy* combines historical disclosure, with politics, and economics, becoming a coherent essay of compulsory reading for all the readers who might be interested.
